## ADMISSION RATES—ALL CAUSES AND RESPIRATORY DISEASES

CONTINENTAL LIMITS OF THE UNITED STATES—1944 AND 1945

CURRENT TRENDS  
Week ending 19 Jan 1946

The admission rate of 736 for All Causes marks a further increase over the previous weeks, and compares unfavorably with the rate of 698 reported a year ago for the corresponding period. However, this rate is more evenly distributed among the Naval Districts; the 3rd, 6th, 7th, 9th, and 13 Districts show a decrease, while the others show an increase over the preceding week.

The rate of 260.8 for Respiratory Diseases keeps the curve for this group of diseases on the upward grade. It is now well above the rate of 230 reported for the corresponding week a year ago. The largest increase comes from the 5th District, with a rate of 380.0, which exceeds the rate of 264.8 reported the week before, by 43.5%. The largest decrease comes from the 6th District, with a rate of 151.5 which is 36.2% less than the rate of 237.4 reported the week previous. Although its rate of 403.4 compares favorably with the one of 417.3 reported the preceding week, the 9th District still tops all the others. The 7th District is lowest, with a rate of 124.8.

INFLUENZA AND CATARRHAL FEVER, ACUTE. This week's combined rate of 185.3 marks an upswing in these two diseases which had been dropping sharply for the three weeks previous. That rate, however, still compares favorably with the rate of 203.3 reported for the last week of December, but stands well above the figures of 149.5 reported a year ago for the corresponding period. The 5th District has the lead this week, with a rate of 270.2, which exceeds the figure for the preceding week by 31.2%. The 1st District, however, has the largest relative increase with a rate of 168.3 which tops the figure of the previous week by 48.4%. The 6th District has the largest drop with a rate of 108.9, which is 39.7% less than the rate for the week before. The 7th District is the lowest, with a rate of 89.3.

PNEUMONIA--BRONCHO AND LOBAR. The combined rate of 2.4 represents one more minor peak in the jagged course of these two diseases. Slightly higher than the rate of 2.2 reported the week before, it still compares favorably with the rate of 4.0 reported a year ago for the corresponding week. The most significant increase was reported from the 5th District, with a rate of 7.0, which is 2.7 times the rate reported the week previous. Increases were also reported from the 8th, 9th, and 13th Districts. Five Districts reported a rate of zero.

PNEUMONIA, ATYPICAL. The rate of 2.8 reported this week represents a 30% drop from the rate for the week previous. It is, nevertheless, 40% higher than the rate reported for the corresponding period a year ago. Great improvement is shown by the 6th and 11th Districts with rates of 3.6 and 5.7 respectively, as against 10.1 and 11.9 reported for the preceding week. There is also some improvement, though less pronounced, from the 1st and 3rd Districts, and the Potomac and Severn River Commands. Other Districts are either stationary or on the increase.

TONSILLITIS AND PHARYNGITIS, ACUTE. The combined rate of 70.3 reported this week continues for these two diseases, the upward trend which began after the first week of the month. Nevertheless, that rate compares favorably with the one of 75.0 reported a year ago for the corresponding week. The 9th District still leads all the others with a rate of 166.2 although this figure is some improvement over the rate of 179.1 reported the week before. The 5th District shows the sharpest increase, with a rate of 97.2, which is nearly 87% greater than the rate of 52.1 reported the preceding week; the Potomac and Severn River Commands and the 7th District show increases of 50% and 71% respectively, over last week's figures. Largest decrease is in the 13th District, whose rate of 25.4 is 58% below the rate reported the week before, and places it below all other districts for the present week.

SCARLET FEVER. The rate of 12.4 breaks the sharp rise shown by this disease last week; it also compares very favorably with the figure of 30.0 for the week ending 20 Jan 1945. The 5th District shows a 50% rise over last week, while the 9th District shows a 44% drop, but still leads all the others. Zero rates are reported by the 4th, 6th, 7th, and 13th Districts.

CEREBROSPINAL FEVER, MENINGOCOCCIC. For the third consecutive week the rate for this disease stands at zero.

MEASLES. The rate of 7.1 marks a sharp increase over last week's figures, and resumes the general upward trend displayed by this disease. The rate of 7.8 for the 3rd District is better than five times the rate for the past week, while sharp increases are also indicated by the 6th, 8th, 9th, and 12th Districts. Substantial drops are reported by the 4th, 5th, and 13th Districts as well as by the Potomac and Severn River Commands. The highest rate (25.4) is reported by the 9th District, while zero rates are reported by the 4th and 7th Districts.
